INTERABRASIV

WHAT EVERY
SURFACE NEEDS

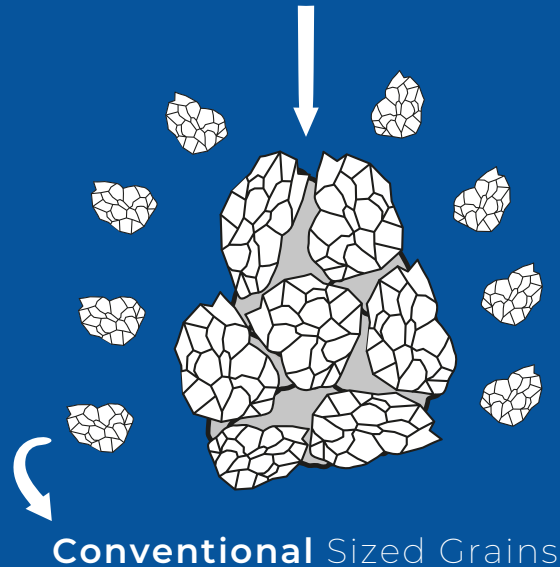

AVALANCHE

COMPACT GRAIN

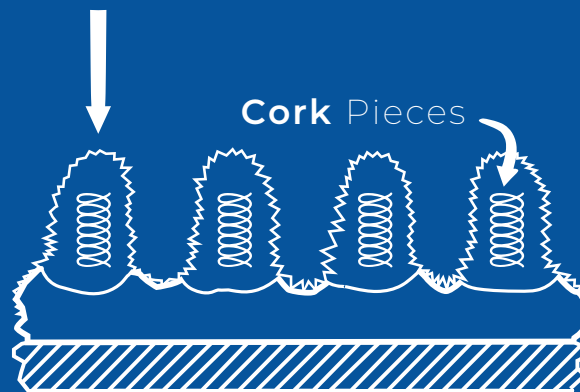

Regular sized grains are treated with a special adhesion system that bonds the grains together to create the **Avalanche®** compact grain.

This technology allows the grains to have a long lasting **lifetime** of a coarse grain, surface finish of a fine grain.

Avalanche® **Agglomerated Compact Grain**

Mixed Finishing Grains

CORK GRAIN

Cork pieces are coated on the backing then covered with micro finishing grains to provide a mirror effect on the surface.

Cork pieces underneath the grains act as a **suspension** coil to dampen the sharpness of the grain and allow the grains to work homogenously on the surface. Cork is a complimentary product to **agglomerated** grain series.
